Computer Science Student Committed to Communicating Technology's Potential to Diverse Audiences

Skills & Interests

Programming and Frameworks: Java, C++, Python, Django, SpringBoot, TensorFlow, NumPy

Other Technical Skills: Model-View-Controller (MVC), SQL, Assembly Language (MIPS)

Soft Skills: Teamwork, Adaptability, Critical thinking, Leadership, Communication

Tools: GitHub, Microsoft Office, Google Workspace, Visual Studio, MS SQL Server, Jupyter Notebook, Anaconda

Activities and Awards: President Walker Award, President Sparks Award, Past PSU Harrisburg Coding Club Secretary

Education

Penn State University – Capital College

BS, Computer Science. 3.99

Minor, Mathematics

Harrisburg, PA

Aug 2021 - May 2025

Coursework

Relevant Courses: Data Structures, Algorithms, Probability and Statistics, Matrices, Object-Oriented Programming with Web-Based Applications, Software Engineering and Design, Databases, Machine Learning, Graph Theory

Work Experience

Machine Learning Intern, Department of Homeland Security

May – August 2023 & May – August 2024

- Utilized Machine Learning Autoencoders for Latent Space Representation on CT X-ray Data
- Applied Deep Learning for feature extraction from CT images; leveraged machine learning autoencoders for comprehensive CT X-ray data analysis, enhancing accuracy and efficiency

Projects

Three-Dimensional Autoencoder

- Designed a 3D autoencoder to convert CT x-ray luggage scans into a TFRecords dataset
- Leveraged the model for efficient data compression and reconstruction, enabling the analysis of different latent space representations

Capstone Project: Parking Permit System

- Collaborated on developing an Android app that detects and reads license plates using YOLO and Google ML Kit
- Connected the app to a database via an API for real-time data management
- Implemented a web interface with CRUD operations for administrative management

Facial Similarity/Recognition System

- Created a facial recognition system using YOLO for face detection and ResNet for feature extraction
- Implemented FAISS to efficiently manage and search facial feature vectors in a database

Spring Boot Web App Bookstore

- Built a Spring Boot MVC web application for an online bookstore
 - Managed data with Spring Data JPA and secured user authentication through Spring Security
-
